

DHARUN S

Full Stack .NET Developer

Erode, Tamil Nadu, India | +91 6383240397 | dharun0108@gmail.com | github.com/dharun0108 | linkedin.com/in/dharun-subramani01

PROFESSIONAL SUMMARY

Full Stack .NET Developer with 3 years of hands-on experience designing, developing, and deploying enterprise web applications and RESTful APIs on the Microsoft stack (C#, .NET / .NET 8, ASP.NET Core, MVC, Web API, Minimal API, LINQ, Entity Framework Core). Proven track record building ERP/inventory systems with IoT/RFID tracking, software licensing platforms, and document-auditing tools, alongside healthcare interoperability projects involving clinical data normalization and telehealth. Experienced across SQL Server, MongoDB, Azure Cosmos DB, and Microsoft Access, with front-end development in JavaScript, jQuery, HTML5, and CSS3, and hands-on deployment and hosting on Microsoft Azure. Built a clinical data normalization engine mapping raw medical records to LOINC, SNOMED CT, ICD-10, and RxNorm terminologies, and contributed to a .NET 8 telehealth Web API integrating C-CDA/FHIR records, Epic FHIR, Kno2, secure messaging, and wearable devices under HIPAA-aligned data handling. Comfortable owning features end to end, from database design and business logic through UI and Azure deployment.

TECHNICAL SKILLS

- **Programming Languages:** C#, JavaScript
- **Backend & Frameworks:** .NET / .NET 8, ASP.NET Core, ASP.NET MVC, ASP.NET Web API, ASP.NET Minimal API, LINQ, Entity Framework Core, ADO.NET, Windows Forms, Console Applications
- **Frontend:** jQuery, JavaScript, HTML5, CSS3
- **Databases & Storage:** SQL Server, MongoDB, Azure Cosmos DB, Microsoft Access, Redis, Azure Blob Storage
- **Cloud & DevOps:** Microsoft Azure, Azure DevOps, Git, Hangfire (background jobs), application hosting & deployment
- **APIs & Integrations:** RESTful APIs, Epic FHIR, Kno2 (TEFCA / Carequality, Direct / Fax), wearable device integrations (Fitbit, Apple HealthKit, Garmin, Google Fit), IoT / RFID, DLL-based license key generation
- **Healthcare Standards:** FHIR, C-CDA, HIPAA-aligned data handling; terminologies: LOINC, SNOMED CT, ICD-10, RxNorm, CPT
- **Practices & Methodologies:** Object-Oriented Programming, RESTful architecture, Microservices, Agile / Scrum, Unit Testing

PROFESSIONAL EXPERIENCE

Full Stack .NET Developer

App Innovation Technologies Pvt Ltd | November 2023 - Present

- Built a clinical data normalization engine (TeleMEDIX) in .NET using ASP.NET Minimal API that standardizes raw medical records into fully-coded patient snapshots across ~25 clinical sections and computes 15 clinical risk scores for downstream clinical decision support.
- Contributed to a .NET 8 REST API backend for a telehealth platform that aggregates patient records from external hospitals via Kno2 and Epic FHIR into a single longitudinal medical record, implementing JWT-based authentication, role-based access, secure document exchange, and wearable device integrations.
- Developed and maintained REST APIs and web applications using ASP.NET Core (MVC, Web API, Minimal API) with C#, LINQ, Entity Framework Core, and ADO.NET, owning features from database design through UI and deployment.
- Designed and built an ERP inventory platform (ICS / Roomer) with IoT/RFID connectivity for real-time product identification and stock tracking.
- Developed a license-provisioning web application for Scantron that generates product keys from organization-provided DLLs and tracks key expiry and usage.
- Processed large Microsoft Access survey datasets for institutions including New York University and Union College, converting raw data into clean, human-readable reports.

- Normalized clinical data against medical terminologies (LOINC, SNOMED CT, ICD-10, RxNorm, CPT) and integrated healthcare records via C-CDA/FHIR under HIPAA-aligned handling; ran long-running workloads as background jobs with Hangfire.
- Designed and maintained data access across MongoDB, Azure Cosmos DB, and Microsoft Access, using Redis and Azure Blob Storage for caching and document storage; deployed and hosted applications on Microsoft Azure through to production.
- Built interactive web front-ends with jQuery, JavaScript, HTML5, and CSS3, integrating them with back-end APIs; created multiple Windows and console applications to automate recurring manual processes.
- Collaborated directly with client stakeholders to gather requirements and deliver features on schedule, following Agile/Scrum practices.

Web Developer Intern

TechQuest iT Services India Pvt Ltd | Salem, Tamil Nadu | August 2023 - October 2023

- Built and styled web pages for ERP software, gaining hands-on experience with front-end development and real project workflows.

FEATURED PROJECTS

TeleMEDix - Clinical Data Normalization Engine

Healthcare Interoperability | .NET, C#, ASP.NET Minimal API, MongoDB, Azure Cosmos DB, Azure Blob Storage

- Built an end-to-end clinical data normalization engine that ingests raw Longitudinal Medical Records (LMR) and produces standardized, fully-coded patient snapshots for downstream clinical decision support.
- Designed ~25 section pipelines (problems, medications, labs, vitals, allergies, and more) mapping raw clinical data to canonical terminologies including LOINC, SNOMED CT, ICD-10, RxNorm, CPT, and FDA.
- Implemented 15 clinical risk scores (PREVENT, ASCVD-PCE, CHA2DS2-VASc, HAS-BLED, HEART, and more), each returning risk value, tier, inputs used, and coefficient source.
- Built a cache-first data flow using Azure Blob Storage and a Cosmos DB reference index, with MongoDB for terminology lookups, plus confidence scoring and full provenance on every record.

.NET 8 Backend - Web API for App & Web

.NET 8, C#, ASP.NET Web API, MongoDB (Cosmos DB), Redis, Azure Blob Storage, Hangfire | Standards: C-CDA, FHIR, HIPAA

- Contributed to a .NET 8 REST API backend powering a telehealth platform that consolidates a patient's scattered hospital records into one unified health record with AI clinical support.
- Built REST APIs for JWT authentication (role-based access, per-device refresh tokens), multi-step patient onboarding, and HIPAA/consent management.
- Implemented patient health-record aggregation, discovering and retrieving records across hospitals via Kno2 (TEFCA/Carequality) and Epic FHIR, running identity verification prior to retrieval, then parsing C-CDA/FHIR documents (~27 clinical sections) into one longitudinal medical record.
- Built secure document exchange over Kno2 fax and Direct Secure Messaging with delivery auditing and read-receipt notifications.
- Integrated telehealth video visits (booking, availability, per-visit and subscription payments) with live transcription and AI-generated SOAP notes.
- Integrated wearable and health data sources (Fitbit, Apple HealthKit, Garmin, Google Fit) for continuous patient vitals, running heavy workloads as background jobs with Hangfire.

ICS (Roomer) - ERP / Inventory Management Platform

- Built an ERP solution to manage inventory operations end to end; integrated IoT connectivity using RFID tags to identify product ownership, track stock movement, and monitor remaining quantities, enabling real-time inventory tracking.

Scantron Corp - License Provisioning & Document Auditing Applications

- Software License Key: developed a license-provisioning web application where users log in to obtain product licenses for scanners; keys are generated from organization-provided DLLs and embedded into the appropriate product, with expiry and usage tracking.
- Price Book: built a document-auditing application to manage organizational asset documents, allowing users to securely create, edit, and delete records.

Survey Data Management - Access Database & Reporting

- Handled multiple Microsoft Access databases for institutions including New York University, Union College, Blues Health, and the National Association of School Psychologists, collecting survey data and converting it into clean, human-readable reports.

Windows & Console Builds - Desktop Automation Tools

- Created multiple Windows and console applications to automate several existing manual processes through console-based builds.

EDUCATION

- B.Sc. Computer Science - Nandha Arts and Science College, Bharathiar University, 2021 (69%)
- Higher Secondary (12th) - State Board, 2017 (54%)
- SSLC (10th) - State Board, 2015 (66%)
